What happens after I’m vaccinated?

How long will it last?
Do I still need to wear a mask?
Do I still need a PCR test to travel?
Can tourist come back to SXM?

Celebrity Cruises®
For now

Even when you are vaccinated, you still have to:
- Wear a mask.
- Practice social distancing.
- Do a PCR test for traveling.

WHY?

Because there is still a small chance (5%) that you have Covid-19 and can infect others. Especially those who are not vaccinated yet.

Infections worldwide are still too high and vaccines levels too low to allow that 5% risk.

But also:

You’ve reduced the chance of being infected with 95% effective against the infection. But also against hospitalization & death.

You did your part in fighting this pandemic.

When enough people get vaccinated

You help get the disease under control. You can hug your family.

Don’t need to wear a mask again.

You can travel freely again when you are vaccinated without PCR test.

This also means that tourists can return to SXM

Which means:
- Economic recovery
- More jobs
- Resumption of normal life

This vaccine is effective for at least 1 year & possibly longer. We know from the person vaccinated one year ago that he still has high levels of antibodies. This means that the vaccine is effective for at least one year but perhaps longer. More time will have to pass to know how long exactly.
